## **Product Datasheet**

Product Name Fibroblast Growth Factor Receptor 2 Fc Chimera Human Recombinant

Cata No CB500837 Source Insect Cells

Synonyms Keratinocyte growth factor receptor 2, CD332, FGFR2.

## Description

Fibroblast Growth Factors (FGFs) comprise a family of at least eighteen structurally realted proteins that are involved in a multitude of physiological and pathological cellular processes, including cell growth, differentation, angiogenesis, wound healing and tumorgenesis. The biological activities of the FGFs are mediated by a family if type I transmembrane tyrosine kinases which undergo dimerization and autophosphorylation after ligand binding. Four distinct genes encoding closely related FGF receptors, FGFR-1to -4 are known. Multiple forms of FGFR-1 to -3 are generated by alternative splicing of the mRNAs. A frequent splicing event involving FGFR-1 and -2 results in receptors containing all three Ig domains, referred to as the alpha isoform, or only IgII and IgIII, referred to as the ß isoform. Only the alpha isoform has been identified for FGFR-3 and FGFR-4. Additional splicing events for FGFR-1 to -3, involving the C-terminal half of the IgIII domain encoded by two mutually exclusive alternative exons, generate FGF receptors with alternative IgIII domains (IIIb and IIIc). A IIIa isoform which is a secreted FGF binding protein containing only the N-terminal half of the IgIII domain plus some intron sequences has also been reported for FGFR-1. Mutations in FGFR-1 to -3 have been found in patients with birth defects involving craniosynostosis.

Soluble FGFR-2a (IIIc) Fc Chimera Human Recombinant fused with Xa cleavage site with the Fc part of human IgG<sub>1</sub> produced in baculovirus is a heterodimeric, glycosylated, Polypeptide chain and having a molecular mass of 195 kDa.

The FGFR2 is purified by proprietary chromatographic techniques.

### **Physical Appearance**

Sterile Filtered White lyophilized (freeze-dried) powder.

## **Biological Activity**

Determined by its ability to inhibit human FGF acidic-dependent proliferation on R1 cells. The  $ED_{50}$  for this effect is typically at 15.0-30.0 ng/ml.

## **Purity**

Greater than 90.0% as determined by:

- (a) Analysis by RP-HPLC.
- (b) Analysis by SDS-PAGE.

#### **Formulation**

CD332 was lyophilized from a concentrated (1 mg/ml) sterile solution containing no additives.

#### Reconstitution

It is recommended to reconstitute the lyophilized FGFR-2 in sterile PBS not less than 100 µg/ml, which can then be further diluted to other aqueous solutions.

#### **Stability**

Lyophilized FGFR2A although stable at room temperature for 3 weeks, should be stored desiccated below -18℃. Upon reconstitution FGFR2 should be stored at 4℃ between 2-7 days and for future use below
